G'DAY

We've heard your organisation is using IBM Connections. How's the user adoption going?

Like you, us Australians at ISW began using IBM Connections a few years back, drawn to its powerful, all-in-one social intranet capabilities. But despite this great appeal its true value is achieved when everyone in an organisation is actively using it. We found the rate of adoption across our business just too slow - So we developed Kudos!

Kudos?

Kudos is a suite of products designed to encourage adoption and engagement for IBM Connections, the world's leading enterprise collaboration platform. It seamlessly installs within your Connections environment and gives all users powerful new tools and incentive to use Connections.

Now with over 1 million licences sold in over 35 countries, Kudos has fast become many IBMer's 'must-have' add on for the Connections suite, winning a string of accolades since its launch in 2013. With a dedicated support team you can buy Kudos direct or ask your local IBM Business Partner. – We have a global partner network across six continents!
